Grupo Cacao

One place to read, travel, buy and get paid in bitcoin

THE BIG IDEA

For users

One place covers everything: read about a place, book the experience, buy local products, and pay for all of it with bitcoin, in cents and in seconds.

For business owners

Pay collects the money and Ledger handles the invoices and taxes, so accepting bitcoin is no longer extra work. It becomes the easiest way to sell.

Grupo Cacao home page

https://cacao-grupo.vercel.app

The front door to the group. It shows the five products and how they fit together: three for the public (Media, Travel, Market) and two for businesses (Pay, Ledger).

> **Why it matters:** most bitcoin projects in El Salvador are isolated apps. Here, the stories you read lead to the places you can visit and the products you can buy, and every payment runs through one engine.

FOR THE PUBLIC

Cacao Media

https://cacao-media.vercel.app

A news and stories site about El Salvador: surf, volcanoes, sea turtles, local food and culture. Readers unlock a story by paying a small amount over Lightning (120 sats, a few cents). Stories linked to a Travel experience are free. No account or subscription is needed, and a paid story stays open in that browser.

> **Why it matters:** micropayments are something only Lightning makes practical. Local writers get paid per story instead of depending on ads, and readers pay cents instead of a monthly subscription.

Cacao Travel

https://cacao-travel.vercel.app

Local experiences you can book: surfing, kayaking, hiking volcanoes, lagoons and beaches. Each one connects to the Media stories about that place.

> **Why it matters:** tourism is one of the main ways bitcoin reaches El Salvador's economy, through places like El Zonte ("Bitcoin Beach") and Surf City. Travel lets small local operators reach visitors who already want to pay in bitcoin.

CacaoMarket

https://cacao-market.vercel.app

An online market for Salvadoran products such as coffee, pupusas, horchata and yuca. You pay with Lightning, track your order, and sellers manage their inventory and orders from an admin panel.

> **Why it matters:** small shops and producers get an online store and bitcoin payments without building any technology themselves.

FOR BUSINESSES

CacaoPay the payment engine

https://cacao-pay.vercel.app

The payment layer for the whole group. Every payment in Media, Travel and Market goes through it. Businesses get a Lightning payment QR and an API to accept bitcoin in their own systems. It also handles remittances, sending money home, as an extra feature.

> **Why it matters:** remittances are about a quarter of El Salvador's GDP, and traditional transfer services charge high fees. Pay gives businesses one simple way to accept bitcoin and offers families a cheaper way to send money.

CacaoLedger invoices and taxes

https://cacao-cuentas.vercel.app

Turns every sale into the electronic invoice (DTE) that El Salvador's tax authority, the Ministerio de Hacienda, requires. It signs each invoice digitally and sends it for approval, and businesses see all their invoices and sales in one place.

> **Why it matters:** electronic invoicing is now mandatory in El Salvador, and it is the main thing stopping businesses from accepting bitcoin "officially." Ledger closes that gap: a business can get paid in bitcoin and stay compliant with Hacienda automatically.

TO TRY IT

Test wallet

https://wings-gotta-farmers-barry.trycloudflare.com/billetera

A demo wallet for paying the Lightning invoices on any of the sites. It can scan the payment QR with the camera or from a photo.

Note: this link only works while your PC and the tunnel are running.
