Grupo Cacao

One place to read, travel, buy and get paid in bitcoin.

For users

Read about a place, book the experience, buy local products, and pay for all of it with bitcoin, in cents and in seconds.

For business owners

Pay collects the money and Ledger handles the invoices and taxes. Accepting bitcoin stops being extra work and becomes the easiest way to sell.

FOR THE PUBLIC

Cacao Media
`cacao-media.vercel.app`

Stories about El Salvador. Unlock one for 120 sats over Lightning, with no account or subscription; stories linked to Travel are free.

Why: micropayments only Lightning makes practical. Writers get paid per story, readers pay cents.

Cacao Travel
`cacao-travel.vercel.app`

Book local experiences: surf, kayak, volcanoes, lagoons and beaches, each tied to the Media stories about that place.

Why: tourism is how bitcoin reaches the economy (El Zonte, Surf City). Small operators reach visitors who want to pay in bitcoin.

CacaoMarket
`cacao-market.vercel.app`

An online market for Salvadoran products. Pay with Lightning and track your order; sellers run inventory and orders from a panel.

Why: small producers get a store and bitcoin payments without building any technology.

FOR BUSINESSES

CacaoPay
`cacao-pay.vercel.app`

The payment engine: every payment in Media, Travel and Market goes through it. A Lightning QR and an API for any business, plus remittances.

Why: remittances are about a quarter of GDP and cost families high fees. One simple way to accept and send bitcoin.

CacaoLedger
`cacao-cuentas.vercel.app`

Turns every sale into the electronic invoice (DTE) Hacienda requires, signs it and sends it for approval, with all sales in one place.

Why: e-invoicing is mandatory and blocks "official" bitcoin sales. Ledger keeps a business compliant automatically.
